I am a **computer science student** passionate about **backend development, automation, and problem-solving**. With expertise in **Python, Java, and SQL**, I have hands-on experience working with **Google Sheets automation**.

Currently, I am **learning React** to expand my **frontend development** skills while improving my **competitive programming** abilities, focusing on **algorithmic problem-solving**. I am also exploring **cloud services like Firebase and Supabase** to build scalable applications.

I thrive on **project-based learning**, preferring **real-world implementations over theory**. My goal is to build **user-friendly, privacy-focused applications** while deepening my knowledge in **databases and full-stack development**, with an emphasis on **mobile-first solutions**.

CERTIFICATIONS

Machine learning with tensorflow
